Research Methodology

I approached this the way a new user would – installed the app, browsed as a first time visitor, went through the subscription joining flow, and read recent reviews before forming any conclusions.

- Installed Subspace app on Android and navigated the full user flow from sign-up to subscription join
- Explored the website (subspace.money) across Home, Explore, Wallet, API, and Blog sections
- Read recent Play Store reviews (January to May 2026), filtering for 1-2 star reviews to identify real pain points
- Compared onboarding and trust flows against CRED, Splitwise , Airbnb, Netflix, and Spotify
- Captured 11 screenshots across all 5 feedback areas as supporting evidence
- Cross-referenced company data via Tracxn, Product Hunt, and the Subspace blog

About Company

Subspace (subspace.money) is a Bengaluru-based consumer fintech founded in 2021 by IIT Madras alumni Ashok Kumar and Mritunjay Dash. It lets users share OTT accounts, split bills, rent gadgets in 10 minutes, buy discounted gift cards across 200+ brands, and discover hyperlocal subscription services. As of FY25, it operates at Rs.36.5 Cr ARR, is fully bootstrapped, and claims 90%+ of operations are run by AI agents.

Strategic Framework --- SWOT

I used SWOT here because Subspace's biggest risks are internal execution gaps (trust, messaging) as much as external competitive pressure.

STRENGTHS Bootstrapped and profitable at Rs.36.5 Cr ARR (FY25) rare in consumer fintech. Genuine PMF in India's OTT heavy market. Negotiate API is technically unique. India's first subscription marketplace. Network effects grow with shared group stickiness.	WEAKNESSES Users report being kicked out of shared subscriptions with no refund path (Play Store, 2026). App home screen conflates 4 use cases confusing for new users. No clear ICP in marketing. Refund issues has been seen into many users .
OPPORTUNITIES India's subscription economy is growing fast. College students are a high sharing, price sensitive ICP not yet explicitly targeted. Negotiate API could become a B2B product for HR/finance teams. WhatsApp native payment flows would reduce group collection friction.	THREATS Netflix India Help Center explicitly says accounts may not be shared outside the household. OTT enforcement could disrupt the core sharing product. CRED and BharatPe are active in adjacent reward/savings spaces. Regulatory attention on payment aggregation is increasing.

User Journey Summary

What I observed while going through the app and website as a first-time user:

Step	Observation
Opened website	Homepage shows 4 equal weight tiles: Add Subscriptions, Bill Payments, Events, Sell Products. No hierarchy or recommended first action for a new visitor.
Opened app	Dark-themed home shows No Active Subscriptions with a single Explore Services. Clean but gives no context on what to do first.
Explored Explore tab	Gift cards, shared subscriptions, and rentals shown together.

	Subscription prices show as Rs.99-Rs.250/device with group counts. Visually dense.
Viewed a subscription listing	Netflix Premium Plan shows admin name, slot count (0/4), next billing date, Rs.171.15 price, and Join Now button. No mention of ToS or refund terms.
Looked for dispute flow	After a join, there is no visible Report Admin or Request Refund option anywhere in the app. Support contact is a phone number found only in Play Store review replies.
Compared competitors	Spotify has a dedicated student page (Rs.69/2 months). CRED uses one clear CTA per screen. Neither conflates multiple use cases on first open.

Competitor Landscape

No direct competitor replicates Subspace's full stack. The table maps individual feature overlaps. The key observation: Subspace's differentiation is not communicated clearly on first open.

Feature	Subspace	CRED	Splitwise	Walnut
Subscription Sharing	Core feature	No	No	No
Bill Splitting	Yes	No	Core	Yes
Negotiate API	Unique moat	No	No	No
Sub Marketplace	India first	Partial	No	No
Gadget Rentals	Yes (10-min)	No	No	No
Gift Card Discounts	200+ brands	Yes	No	No
Profitable / Bootstrapped	Yes	No	No	N/A
In-app Dispute Flow	No	Yes	N/A	N/A
ICP Clarity	Unclear	CC users	Bill splitters	Trackers

The 5 Product Feedbacks

Each feedback covers a distinct product pillar. Priority order is based on User Impact x Execution Feasibility for a small team.

Feedback 1 • FEATURES SERVICES -- *No Dispute Flow: Users Pay, Then Get*

Evidence Collected

Figure 1: Play Store Reviews — Admin Removal (March 2026) user Hrs paid for a subscription from admin Suman, was automatically logged out after a few days. Barjinder Singh reports money stuck and no ratechange option.

Figure 2: Play Store Reviews — Support Non-Response (Jan 2026) Jatin Agnihotri raised the issue multiple times; support team did not reply. Locked amount was not decreasing. 2 people found this review helpful.

Figure 3: Play Store Review — Refund Difficulty (March 2026) *ishahn Sinha notes getting a refund required KYC and Aadhaar with no direct UPI refund. Support number on the site was wrong. Resolution only came after leaving a public negative review.*

Figure 4: Airbnb Resolution Centre — Comparison *Airbnb provides an in-app Request money and Send money dispute flow. Subspace has no equivalent in-app mechanism.*

OBSERVED

When I looked at the Netflix Premium Plan join screen, I found a

	Join Now button, a slot counter (0/4), the admin name, next billing date, and the price (Rs.171.15). There was no refund policy link, no information about what happens if the admin removes me, and no dispute mechanism visible anywhere on the screen. After exploring the rest of the app, I could not find a Report Admin or Request Refund option in any flow. In Play Store reviews from January to May 2026, users like Hrs (1 star, March 2026) describe being automatically logged out after paying. Jatin Agnihotri (January 2026) reported raising the issue multiple times with no response from the support team. ishan Sinha noted that getting a refund required KYC and Aadhaar with no direct UPI option and the support contact number on the website was wrong.
PROBLEM	The shared subscription model depends on members trusting that their payment is protected. Right now, if an admin removes a member or goes inactive, there is no in-app path to resolve the issue. The current support route a phone number surfaced only in Play Store review replies does not scale. Several reviews mention this same pattern across 2026: pay, get kicked out, no response. This may reduce trust among first-time users and could reduce the referral behaviour that group products depend on.
SHIP INSTEAD	Add a Report this Group button on the subscription management screen, visible after joining. Hold member payments for 48 hours before releasing to admins (escrow model). If a member is removed within 72 hours of payment, trigger an automatic refund. Add an Admin Trust Score on group listings built from dispute history and completion rate. This mirrors how Airbnb handles host-guest conflicts and would directly address the most common 1 star complaint in the Play Store.

Figure 5: Subspace Netflix Premium Plan — Join Screen Rs 171.15 for a shared Netflix slot. The screen shows admin name and slot count (0/4) but no refund terms, dispute path, or risk disclosure.

Expected Impact

Trust	Retention	Revenue	Effort
High	High	Medium	Medium

Feedback 2 • UX -- First Open Confusion: Four Products, No Starting Point

Evidence Collected

Figure 6: Subspace Web Home Screen -- After Login *Four equal weight tiles: Add Subscriptions, Bill Payments, Events, Sell Products. No hierarchy, no recommended first action for a new user.*

Figure 7: Subspace Explore Page — Information Density *Favourite brands, gift cards across 10 categories, and shared subscriptions all on one scroll. Visually rich but does not guide a first time user toward a single action.*

OBSERVED

When I first opened the web app, the home screen showed four

	equal weight navigation tiles: Add Subscriptions, Bill Payments, Events, and Sell Products. There was no prompt or recommendation for what to do first. The Explore tab, which I found by navigating manually, showed gift card categories, brand logos with discount percentages, and shared subscription listings all in one view. I noticed that it took me several seconds to find where the shared Netflix plans were. There is no onboarding tour, no intent question, and no personalisation for a new user.
PROBLEM	Subspace has at least four distinct use cases: OTT sharing, gift cards, rentals, and bill splitting. Showing all of them without hierarchy on first open may reduce Day 1 activation because a user with one specific goal has to search across sections rather than being guided to it. Products like CRED keep a single dominant CTA per screen. Subspace's multi-purpose home screen may be contributing to users who install but do not transact.
SHIP INSTEAD	On first launch, show a short intent selector: What do you want to do? Save on OTT / Split a bill / Rent something / Discover deals . Route each user to a focused view based on their answer and store the preference for future sessions. This is a feature flag level change with no back end infrastructure required and can be A/B tested in a week.

Expected Impact

Trust	Retention	Revenue	Effort
Medium	High	Medium	Low

Feedback 3 • GTM & ICPs -- *Broad Messaging: Everyone Is Targeted, Nobody Feels Spoken To*

Evidence Collected

Figure 8: Subspace Explore — Mixed Audience Signals OTT sharing, gift cards for Decathlon and Dominos, and travel deals shown together. No single user type is prioritised or named.

Figure 9: Spotify Student Landing Page — ICP Contrast *Spotify leads with a single price point (Rs.69 for 2 months) for one specific audience. One message, one CTA, one segment.*

OBSERVED	The Subspace website homepage describes the app as: your one-stop destination to save money, rent anything instantly, and enjoy discounted subscriptions and gift cards. The Explore tab mixes OTT sharing (Rs.99/device), gift cards for food, fashion, and travel, and rental services in a single scroll without segmenting by audience type. There is no student specific landing page, no professional tier messaging, and no segment targeted ad creative visible in the Play Store listing or website. The Play Store listing leads with 10 different emoji-heavy bullets covering unrelated categories.
PROBLEM	The group sharing and Negotiate API features are well suited to college students and young professionals price sensitive users who already share passwords and split bills. Spotify targets Indian students with a dedicated landing page and a single clear price (Rs.69/2 months). Subspace's equivalent offer is buried inside a category grid with no student specific framing. Without ICP focused communication, acquisition spend may not be converting the users most likely to refer others.
SHIP INSTEAD	Create two ICP-specific landing pages: (1) for college students a message: Watch Netflix for Rs.99/month, split with your hostel group; (2) for young professionals lead with auto detection: See

Expected Impact

India

Sharing your Netflix account

You may not share your Netflix account outside of your household. A **Netflix Household** is a collection of devices connected to the internet at the main place where you watch Netflix.

People who are not in your household will need to **create their own account** to watch Netflix.

Figure 10: Netflix India Help Center -- Account Sharing Policy Netflix India Help Center states: You may not share your Netflix account outside of your household. People outside the household must create their own account.

Basic	- Unlimited ad-free movies, TV shows, and games - Watch on 1 supported device at a time ↖ - Watch in 720p (HD) Download on 1 supported device at a time
Standard	- Unlimited ad-free movies, TV shows, and games - Watch on 2 supported devices at a time ↖ - Watch in 1080p (Full HD) Download on 2 supported devices at a time
Premium	- Unlimited ad-free movies, TV shows, and games - Watch on 4 supported devices at a time ↖ - Watch in 4K (Ultra HD) + HDR Download on 6 supported devices at a time Netflix spatial audio

Figure 11: Netflix Plan Tiers — Device LimitsAnnotated *Annotated arrows highlight device per paln plan limits: Basic (1), Standard (2), Premium (4). Subspace shared plans involve cross household login within these device slots.*

Join Now

Figure 12: Subspace Netflix Join Screen -- No ToS Disclosure *The join screen shows Rs.171.15 for a shared slot with no disclaimer, no mention of Netflix household policy, and no Platform Approved*

label.

OBSERVED	Netflix's India Help Center page states clearly that accounts may not be shared outside the household and that people outside the household must create their own account. The Subspace Netflix Premium Plan join screen (Figure 12) shows Rs.171.15 for a shared slot with a Join Now button and no disclaimer, no mention of Netflix's household policy, and no distinction between an officially supported family plan and an informal account share. Netflix's plan pages also annotate that each plan tier allows a fixed number of supported devices 1 for Basic, 2 for Standard, 4 for Premium.
PROBLEM	If Netflix actively enforces its household policy on a Subspace facilitated group, users could lose access with no prior warning. Since Subspace provides no risk disclosure on the listing screen, buyers may not be aware of this possibility. There is also a nuance worth noting: the Premium plan allows 4 simultaneous streams, so within plan device sharing could be technically within plan limits depending on how Netflix defines household. That nuance is invisible to buyers and not communicated by Subspace.
SHIP INSTEAD	Add a platform safety label to each listing: Family Plan (Platform Approved) for official multi-user plans versus Community Shared for informal account splits. On Community Shared listings, add a one line risk note and an auto refund guarantee if access is lost within 7 days. This reduces buyer confusion and creates a clearer legal boundary. Longer term, explore official reseller agreements with OTT platforms to convert grey-area sharing into a white label distribution advantage.

Expected Impact

Trust	Retention	Revenue	Effort
Medium	Medium	Low	Low

Feedback 5 • POTENTIAL COLLABORATIONS-- *Negotiate API Has No Partner Surface or B2B Packaging*

Evidence Collected

Figure 13: Subspace Website -- Negotiate API Mention *The Negotiate API is mentioned in a single sentence under the Deals section. No API docs, no partner page, and no impact metrics are linked from here.*

OBSERVED	The Negotiate API is mentioned once on the website homepage under a section called Deals: Our Negotiate API secures discounts, while Super Search recommends the best deals (Figure 13). There is no link to API documentation, no developer page, no partner portal, and no published impact data such as total user savings generated. The website navigation bar includes a Subspace API link but clicking through did not reveal active developer documentation or a B2B landing page. The Business API blog post on the website is dated August 2024 with no follow up content.
PROBLEM	The Negotiate API is the most technically distinctive feature Subspace has built no Indian fintech competitor offers automated price negotiation at this level. But without a B2B surface, the API only benefits individual app users. HR teams at startups and SMB finance managers who manage subscription budgets for groups of employees would likely pay for this as a managed service. Currently, there is no way for those buyers to find, evaluate, or purchase it.
SHIP INSTEAD	Package the Negotiate API as a Subspace for Business product: a dashboard where HR or finance teams input their company's subscription list and receive negotiated rates. First distribution targets: Razorpay's startup ecosystem, Zoho's SMB base, and college ERP platforms for student plan negotiation. Publish a public

Trust	Retention	Revenue	Effort
Low	Medium	High	High

Expected Impact

Prioritisation Logic

Ranked on User Impact x Execution Feasibility for a small team:

#	Feedback	User Impact	Feasibility	Reasoning
1	Admin Trust / Dispute Flow	Critical	Medium	Users losing money with no in app recourse affects every shared subscription purchase
2	Onboarding Intent Flow	High	Fast	Feature flag change; directly improves D1 retention with no backend work
3	ICP-Focused GTM	High	Fast	Landing page + ad creative changes; unlocks college referral loop
4	ToSRisk Disclosure	Medium-High	Fast	UI badge change; reduces legal exposure and builds buyer confidence
5	Negotiate API B2B	High LTV	Slow	Highest margin opportunity but needs biz dev pipeline; longer runway

Potential Collaborations

- Razorpay / Cashfree -- Integrate payment escrow for admin-member transactions, reducing in-house compliance burden.
- Juspay -- 1click checkout for frictionless group payment collection.
- Zoho / Freshworks -- Distribution channel for the Negotiate API B2B product to SMB customers.
- College ERP platforms (Samarth) – Campus level student subscription negotiation and group sharing.
- WhatsApp Business API -- Native group payment collection inside WhatsApp, where most target users coordinate.

Closing Note

Subspace is one of the very few bootstrapped Indian consumer fintechs generating Rs.36.5 Cr ARR without external funding. The Negotiate API and group sharing moat are real. The five issues above are execution gaps: a missing dispute flow, a first open UX that does not guide users, broad marketing that has not found its segment, a platform risk that users do not know about, and a B2B product that has not been built yet.

Bonus:

Figure 14 : Subspace Whatsapp Login – The login through whatsapp also didn't work the OTP is not coming to the registered whatsapp no. but still it is easy to login through sms but whatsapp login is not working.
